## 1 Inleiding

Het Eetlokaal het Witte Huis wordt verbouwd. Ten behoeve van een nieuwe trapgatsparing in de begane grond is een bestaande stalen ligger verstevigd. Deze versteviging is gecombineerd met de nieuwe trap. Tijdens de werkzaamheden is gebleken dat de bestaande vloerligger dusdanig lokaal gecorrodeerd is, dat deze voor een deel geen constructieve functie meer vervult. Dit rapport behandelt de constructieve berekening van de versteviging en trapligger.

Aanvulling versie A d.d. 23-07-2020: De verbindingen met bestaand zijn gecontroleerd en in dit rapport toegevoegd (zie hoofdstuk 4).

### 1.1 Toegepaste rekensoftware

De volgende rekensoftware is voor de berekeningen in dit rapport toegepast:  
TS-raamwerken

## 2 Uitgangspunten

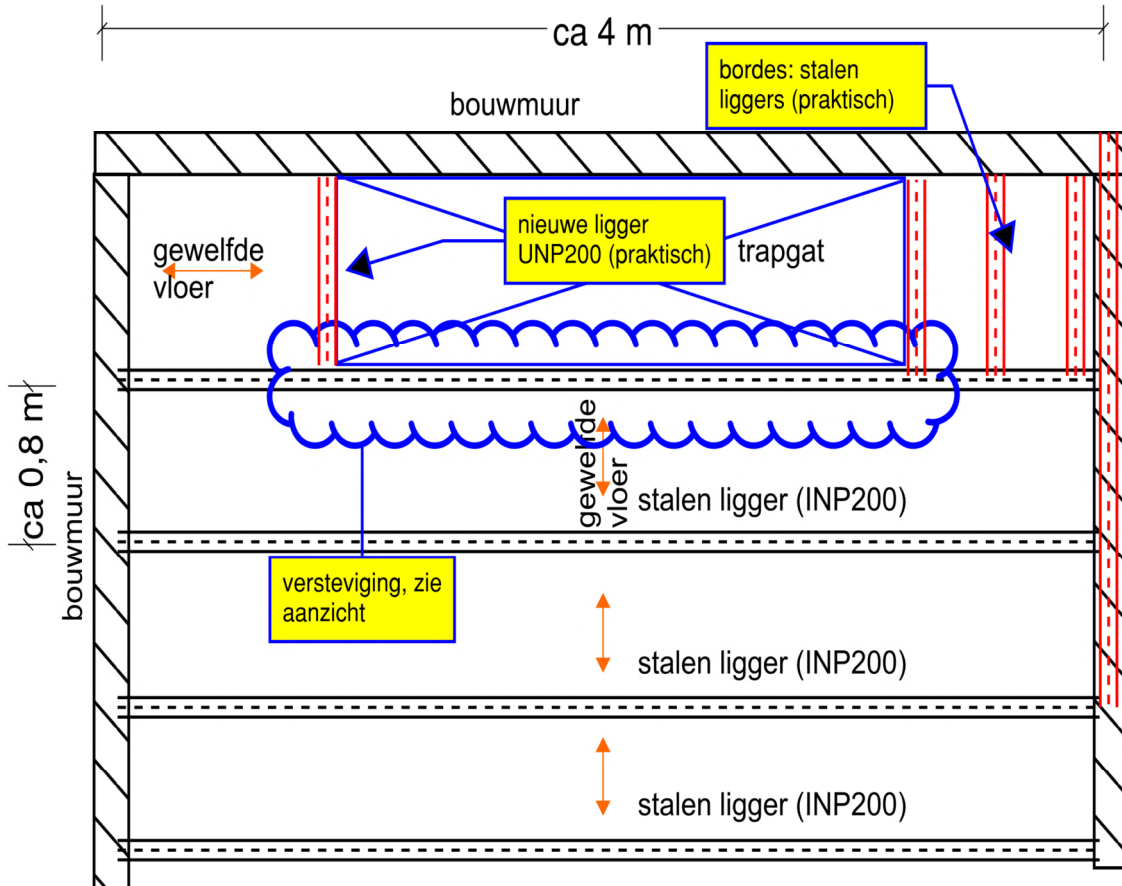

Dit rapport behandelt alleen de versteviging van de bestaande situatie en nieuwe trapligger. Alle overig bestaande constructies waar geen ingrepen plaatsvinden, zijn buiten beschouwing gelaten. De constructie wordt ingedeeld in veiligheidsklasse CC2.

### 2.1 Bestaande situatie

Het ontbreekt aan archieftekeningen van de bestaande situatie. Op basis van de aangetroffen situatie geeft onderstaand fragment het constructieprincipe weer van de oude situatie.

## 2.2 Nieuwe situatie

## Aanzicht versteviging

De nieuwe liggers (S235, UNP200) zijn onderling gelast aan elkaar. Ook is de bestaande ligger gelast aan de nieuwe constructie.

### 3 Berekening

Schema:

Belastingen:

Permanent

eigen gewicht staalconstructie gegenereerd door

$q_1$  en  $q_{trap}$ : eigen gewicht vloer \* belastingbreedte =  $1,25 \text{ kN/m}^2 * 0,8 \text{ m} = 1 \text{ kN/m}$  (conservatief)

Veranderlijk

$q_1 = 4 \text{ kN/m}^2 * 0,8 = 3,2 \text{ kN/m}^2 \rightarrow$  neem  $4 \text{ kN/m}^2$  (conservatief)

$q_{trap} = 4 \text{ kN/m}^2 * 0,5 = 2 \text{ kN/m}^2$

Op elke ligger is tevens een puntlast van 7 kN meegenomen

Brand: De constructie maakt geen onderdeel uit van de hoofddraagconstructie of een vluchtweg. Veiligheidshalve is gerekend met een brandwerendheid van 30 minuten (onbeschermd).

Conclusie: De staalspanning (UGT) van de bestaande en nieuwe liggers  $< 235 \text{ N/mm}^2$ , voldoet ruim op sterkte  
Brand werendheid bedraagt meer dan 30 minuten.

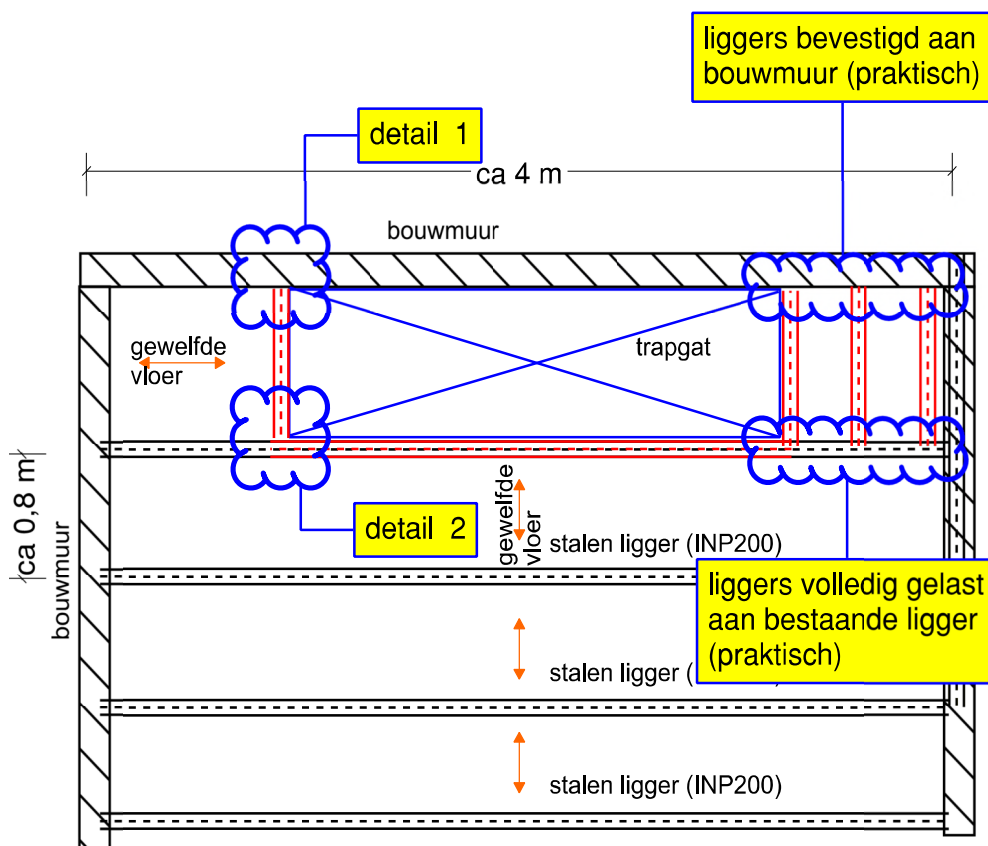

Constructie voldoet, zie ook in- en uitvoer TS-raamwerken op volgende pagina's

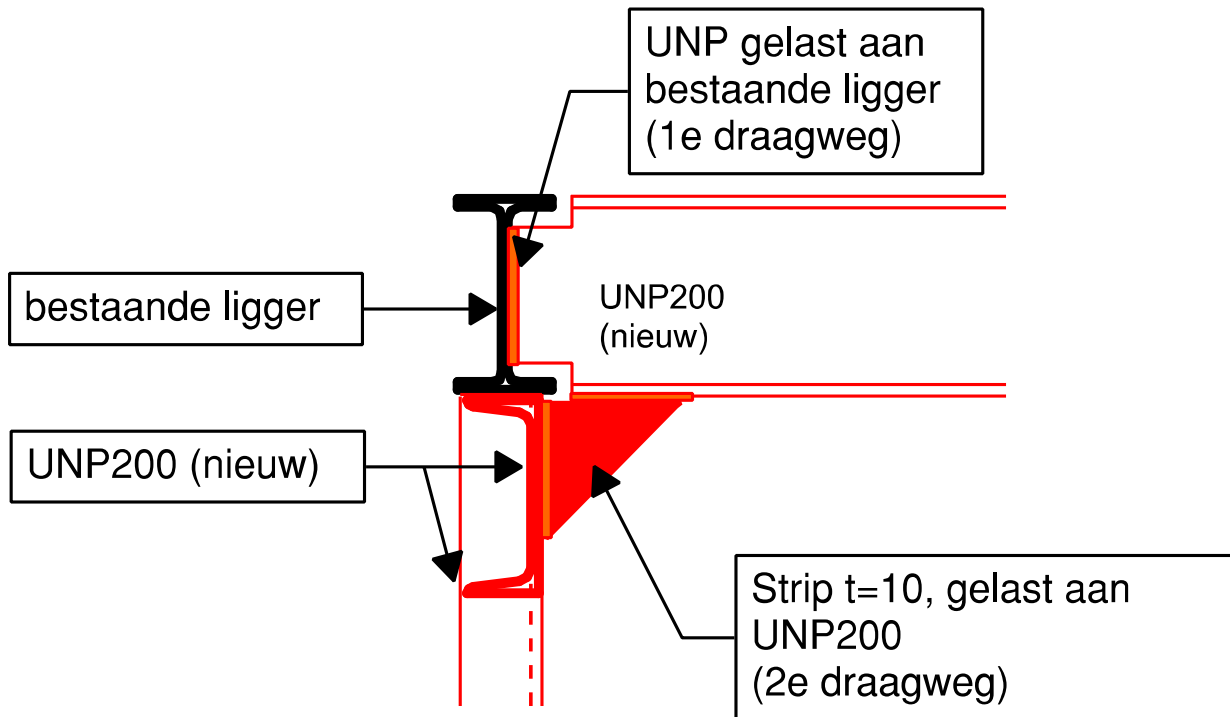

## 4 Aansluitingen met bestaand

Zie onderstaande figuur voor de aansluitingen met bestaand. Alle staalprofielen worden gelast met elkaar verbonden. Dit is voor de eerste draagweg meer dan voldoende. Lokaal worden nog enkele verstevigingen aangebracht voor een tweede draagweg.

Detail 1

Detail 2

## **Bijlage: Berekening TS-raamwerken**

Project.....: 2020 - Het Witte Huis  
 Onderdeel....: Stalen portaal trap en verstevinging  
 Constructeur.: MA  
 Dimensies....: kN;m;rad (tenzij anders aangegeven)  
 Datum.....: 31/05/2020  
 Bestand.....: q:\2020\2020 - bolwerk\2020-stalen spant.rww

Belastingbreedte.: 1.000  
 Rekenmodel.....: 1e-orde-elastisch.  
 Theorie voor de bepaling van de krachtsverdeling:  
     Geometrisch lineair.  
     Fysisch lineair.

Gunstige werking van de permanente belasting wordt automatisch verwerkt.

### Toegepaste normen volgens Eurocode met Nederlandse NB

Onderdeel....: Stalen portaal trap en verstevinging

**UNITY-CHECK'S**

OMHULLENDE VAN ALLES

----- Toelaatbare unity-check (1.0)  
----- Hoogste unity-check i.v.m. knikstabiliteit  
----- Unity-check i.v.m. kipstabiliteit  
----- Unity-check i.v.m. kip- en knikstabiliteit  
----- Hoogste unity-check i.v.m. doorsnedecontrole  
----- Hoogste unity-check i.v.m. doorbuiging  
----- Hoogste unity-check i.v.m. brand
