# 1 - Algemeen

## 1.1 - Korte projectomschrijving

Adviesburo Schoenmakers heeft het bouwkundige ontwerp, de verdere uitwerking en de constructieve engineering verzorgd van:

project : Woning  
type : Nieuwbouw  
bouwadres : Prinsenstraat ong. (naast nr. 46)  
opdrachtgever : 5.1.2.e

## 1.2 - Documentomschrijving

Dit document betreft de gewichts- en sterkteberekening van de woning.

Het deel met het plat dak valt onder het vergunningsvrije gedeelte, dit is verder niet meegenomen in de vergunningsaanvraag.

## 1.3 - Constructieopbouw

dak : dakpannen, dakplaten, houten gordingen  
plat dak : dakbedekking, isolatie, breedplaatvloer  
zoldervloer : houten balklaag  
1ste verdiepingsvloer : breedplaatvloer  
begane grondvloer : PS-isolatievloer  
wanden : kalkzandsteen  
fundering : fundering op staal

## 1.4 - Bijbehorende documenten

In de onderstaande tabel zijn de documenten weergegeven, waarop onderliggende berekening is gebaseerd.

## 2.5 - Windbelasting

Conform de NEN-EN 1991-1-4 kan de optredende stuwdruk worden bepaald, o.b.v. de onderstaande uitgangspunten.

|               |     |   |                                   |

| Soort terrein | III | - | bebouwd                           |

## 2.6 - Brandwerendheid

Een vloer, trap of hellingbaan waarover of waaronder een vluchtroute voert, bezwijkt niet binnen 30 minuten bij brand in een subbrandcompartiment waarin die vluchtroute niet ligt.

Een bouwconstructie bezwijkt bij brand in een brandcompartiment waarin die bouwconstructie niet ligt, niet binnen de in hieronder aangegeven tijdsduur door het bezwijken van een bouwconstructie binnen of grenzend aan dat brandcompartiment.

|                                       |   |                |
|---------------------------------------|---|----------------|
| hoogste vloer met een verblijfsgebied | : | ca. 3,00 meter |
| functie van het verblijfsgebied       | : | Woningbouw     |
| hoofddraagconstructie                 | : | 60 minuten     |
| reductie                              | : | 30 minuten     |
| toe te passen brandwerendheid         | : | 30 minuten     |

Deze brandwerendheid wordt bereikt door de constructieve brandwerendheid te omkleden / schilderen / betongevulde profielen (met wapening) toe te passen.

In de brandwerende scheidingen toegepaste constructie onderdelen dienen minimaal een brandwerendheid te hebben die overeenkomt met de eisen gesteld aan deze brandwerende scheiding.

## 2.10 - Algemene richtlijnen grondverbetering

- De ontgraving dient zodanig breed te zijn dat de funderingsdruk zich vanaf de onderzijde van de fundering onder een hoek van 45° kan spreiden in het goede zandpakket
- De ontgraving voor de grondverbetering weer aanvullen met schoon zand in lagen van 0,30 m dikte, waarbij iedere laag verdicht dient te worden met een mechanische trilplaat. Dit aantrillen dient te geschieden in 3 gangen per laag, welke om en om haaks op elkaar moeten worden uitgevoerd
- De aanvulling in den droge uit te voeren, zo nodig de grondwaterstand te verlagen tot 0,50 m onder het ontgravingsniveau
- Het zandpakket onder de funderingsstroken dient een minimale sondeerwaarde te hebben van 4 Mpa, vanaf aanlegniveau tot minimaal 1 m minus aanlegniveau
- Indien geen grondverbetering hoeft te worden toegepast, de bouwput natrillen zodat aan bovenstaande eisen wordt voldaan

Aangehouden peil gebouw: 10,25 m + NAP  
 Maximale grondwaterstand: 9,40 m + NAP

### 3.4 - Verhoogde sneeuwbelasting

#### 3.4.1 - Verhoogde sneeuwbelasting

Conform de NEN-EN 1991-1-3 kan de verhoogde sneeuwbelasting worden bepaald, o.b.v. de onderstaande uitgangspunten.

$b_1 = 7,10$  m  
 $b_2 = 4,50$  m  $l_s = 1,20$  m  
 $h = 0,60$  m  $5,00$  m  $\leq l_s \leq 15,00$  m  
 $\alpha = 55^\circ$

$\mu_1 = 0,8$  (het lagere dak is plat)  
 $\mu_2 = \mu_s + \mu_w$

$$\mu_s = 0,067$$

$$\mu_w = b_1 + b_2 / 2h \leq \gamma^* h / s_k = 9,667 \leq 1,714 \quad 0,8 \leq \mu_w \leq 4 \quad \mu_w = 1,71$$

$$\mu_2 = 1,781 \quad P_{rep} = 1,25 \text{ kN/m}^2 \quad \text{gelijk aan ongeveer} \quad 0,62 \text{ m sneeuw}$$

$$P_{rep} = 1,25 \times 1,00 = 1,25 \text{ kN/m}^2$$

21 sneeuwophoping

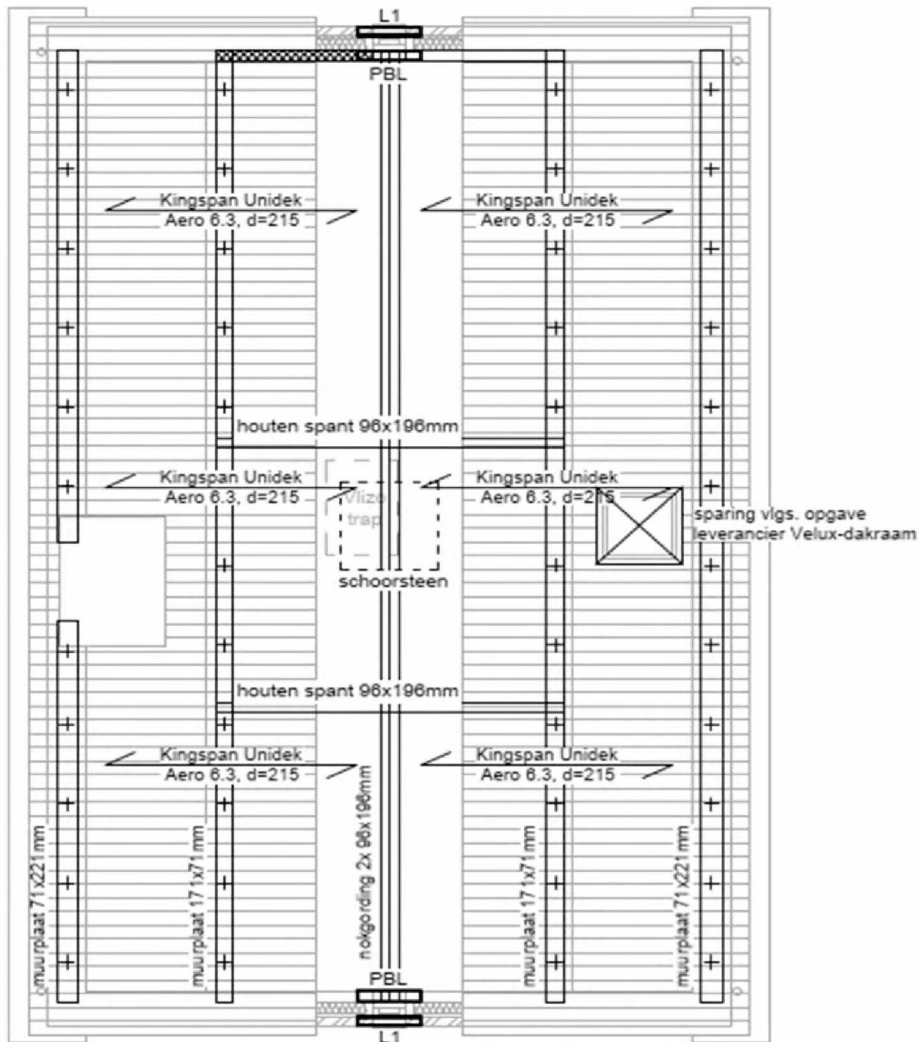

$$= 1,25 \text{ kN/m}^2$$

## 5.16 - Funderingsadvies

### Rekentechnische uitgangspunten

- Aantal uitgevoerde sonderingen: 3
- Sondeer peil: PUT = 9,97 m + NAP
- Grondwaterstand: 9,40 m + NAP
- Aangehouden peil: 10,25 m + NAP
- Indeling in geotechnische categorie 2 (GC2)
- Op basis van de gemaakte sonderingen wordt een fundering op staal geadviseerd.

### Funderingsberekening

Het draagvermogen van de stroken is berekend met Technosoft 'Fundering op staal'. De berekeningen zijn uitgevoerd met de waarden, die volgen uit de gewichtsberekening.
