The diagram shows a cross-section of a road profile. The top part displays two horizontal segments representing different levels: a higher segment labeled 'kadastraal verschil' with dimensions 0.72 and 1.34, and a lower segment labeled 'afname betelbaar oppervlakt' with dimensions 0.57 and 0.49. Below this, a detailed cross-section shows the road surface (green) and the existing ground level (grey). Key elevation points are marked: -0.89 at the left shoulder edge, -1.25 at the bottom of the ditch, -0.95 at the center of the road bed, and -0.92 at the right shoulder edge. A blue dimension line indicates a width of 1.34 between the shoulder edges.

[illegible]

Diagram illustrating a road cross-section with a parabolic curve. The diagram shows the road profile, the curve length (200m), and the sight distance (121m). The curve is defined by two tangent segments of 156m each. The vertical curve is labeled with elevations: -0.16, 1.1, -0.45, 0.30, and -1.00. The curve is labeled "WV -100". The diagram also shows the "kadastral verschil" (cadastral difference) and the "afname beeldbaar oppervlakte" (decrease in visible area).

Diagram illustrating a road cross-section with a parabolic curve. The diagram shows the road surface profile and the dimensions of the curve. The curve length is 121m, the horizontal distance from the start of the curve to the lowest point is 100m, and the vertical offset is 1.33m. The diagram is labeled "kadastraal verschil" and "afname fietsebaan oppervlakte".
