1 Inleiding

1.1 Aanleiding

Deze kwantitatieve risicoanalyse (QRA) is opgesteld voor Ad van Geloven B.V. (verder: Van Geloven) gelegen aan de Kraaivenstraat 1, te Tilburg. De aanleiding voor het opstellen van de kwantitatieve risicoanalyse is het voornemen om de vriesruimte uit te breiden. Als onderdeel van de uitbreiding is Van Geloven voornemens een ammoniakkoelinstallatie te plaatsen die energietoevoer krijgt van warmtepompen. Hierdoor gaat Van Geloven een nieuwe milieubelastende activiteit ondernemen, namelijk het exploiteren van een koelinstallatie met meer dan 10.000 kg ammoniak, en is daarmee verplicht een QRA op te stellen.

Onderhavige QRA maakt onderdeel uit van de aanvraag voor een wijziging op de omgevingsvergunning in overeenstemming met de Omgevingswet.

1.2 Doelstelling

Het doel van de QRA is het vaststellen van het plaatsgebonden risico en de aandachtsgebieden van de risicodragende activiteiten. Aanvullend is het groepsrisico opgenomen, om de impact voor de populatie binnen een aandachtsgebied beter te kunnen duiden. De uitkomsten van de in dit rapport beschreven uitvoering van de QRA worden beschouwd in het kader van de wetgeving op het gebied van externe veiligheid, zoals opgenomen in het Besluit Kwaliteit Leefomgeving (Bkl).

1.3 Risicoanalysemethodiek

De risicoberekeningen zijn uitgevoerd overeenkomstig het Rekenvoorschrift Omgevingsveiligheid [1] en de bijbehorende toelichting van juli 2025, in combinatie met het rekenprogramma Safeti-NL [2].

1.4 Leeswijzer

Hoofdstuk 2 geeft een korte toelichting op het externe veiligheidsbeleid en de bijbehorende normen. In hoofdstuk 3 is een algemene beschrijving van de inrichting opgenomen. Onderdeel van dit hoofdstuk is een beschrijving van de activiteiten en de installaties. In hoofdstuk 4 worden de gebiedsfuncties, omgevingsbebouwing en omgevingsfactoren beschreven. Hoofdstuk 5 laat de uitwerking van de LOC scenario’s zien. De resultaten ten aanzien van de berekeningen worden weergegeven in hoofdstuk 6. Het plaatsgebonden risico en het groepsrisico maken hiervan deel uit. Hoofdstuk 7 beschrijft de conclusie.

2 Beleid met betrekking tot externe veiligheid

Het beleid voor externe veiligheid is gericht op het beperken en beheersen van risico's voor de omgeving vanwege:

- het gebruik, de opslag en de productie van gevaarlijke stoffen (inrichtingen);
- transport van gevaarlijke stoffen (openbare wegen, water- en spoorwegen en buisleidingen);
- het gebruik van luchthavens.

Externe veiligheid heeft betrekking op de veiligheid van degenen die niet bij de risicovolle activiteit zelf zijn betrokken, maar die als gevolg van die activiteit wel risico's kunnen lopen. Dit kunnen bewoners zijn van huizen en instellingen in de buurt, maar ook werknemers bij bedrijven of kantoren en leerlingen in de omgeving van de risicovolle activiteit.

Het risico wordt in beeld gebracht door middel van drie risicomaten:

- Plaatsgebonden risico (PR);
- Het aandachtsgebied van de milieubelastende activiteiten;
- Groepsrisico (GR).

Deze risicomaten worden verderop beschreven.

De specifieke regels en richtlijnen voor inrichtingen die voorheen in het Bevi waren opgenomen, zijn nu geïntegreerd in de Omgevingswet die per 1 januari 2024 in werking is getreden. In de onderstaande paragrafen wordt een korte samenvatting gegeven van belangrijke begrippen en bepaling betreffende externe veiligheid in de omgevingswet.

2.1 Kwetsbare, beperkt kwetsbare en zeer kwetsbare gebouwen en locaties

Bij de normstelling in de omgevingswet wordt onderscheid gemaakt tussen kwetsbare, beperkt kwetsbare en zeer kwetsbare gebouwen en locaties. In bijlage VI van het Besluit Kwaliteit Leefomgeving (Bkl) is gespecificeerd welke soorten gebouwen en locaties in welke categorie vallen. Hierbij is onder andere het aantal mensen dat er gedurende langere tijd aanwezig kan zijn en de zelfredzaamheid van de mensen van belang. Onder een beperkt kwetsbaar, kwetsbaar en zeer kwetsbaar gebouw wordt ook verstaan een gebouw als bedoeld in bijlage VI van het Bkl dat nog niet aanwezig is, maar op grond van het omgevingsplan of een omgevingsvergunning voor een omgevingsplanactiviteit mag worden gebouwd.

Gebouwen en locaties die niet onder een van de categorieën kunnen worden ingedeeld, worden vanuit het oogpunt van externe veiligheid niet als kwetsbaar beschouwd. De normen uit het Bkl zijn op dergelijke gebouwen of locaties niet van toepassing.

Bedrijfsgebouwen worden in principe als beperkt kwetsbare gebouwen aangemerkt. Gebouwen of locaties die een functionele binding hebben met een activiteit als bedoeld in bijlage VII van het Bkl, zoals de gebouwen of locaties van bedrijven die een Seveso-inrichtingen exploiteren, worden echter niet als (beperkt) kwetsbaar gebouw of (beperkt) kwetsbare locatie aangemerkt bij de toepassing van de normen voor het plaatsgebonden risico.

2.2 Plaatsgebonden risico

Dit is het risico op een specifieke locatie. Door middel van iso-risicocontouren, waarbij punten met gelijk risico worden verbonden tot een contour, worden de risico's op een kaart inzichtelijk gemaakt.

Het PR geeft aan wat de kans is dat een persoon overlijdt wanneer hij zich onbeschermd in het op de plattegrond aangegeven gebied bevindt. Bij het berekenen van het risico wordt er vanuit gegaan dat een persoon zich 24 uur per dag op deze plek bevindt. Voor de 10^{-06} contour geldt over het algemeen dat deze binnen de poorten van de inrichting moet blijven. Indien dit niet mogelijk is geldt er voor de verschillende gebouwen en locaties het volgende:

Voor kwetsbare en zeer kwetsbare gebouwen en kwetsbare locaties geldt:

- PR lager dan 10^{-6} per jaar: toegestaan.

Voor beperkt kwetsbare gebouwen en locaties geldt:

- PR hoger dan 10^{-6} per jaar: niet toegestaan tenzij er zwaarwegende argumenten aanwezig zijn waardoor hiervan kan worden afgeweken;
- PR lager dan 10^{-6} per jaar: toegestaan.

2.3 Aandachtsgebieden

Aandachtsgebieden zijn gebieden die zichtbaar maken waar mensen binnenshuis, zonder aanvullende maatregelen, onvoldoende beschermd kunnen zijn tegen de gevolgen van ongevallen met gevaarlijke stoffen door een nabijgelegen milieubelastende activiteit.

Er is een onderscheid tussen drie soorten gevaren: warmtestraling (brand), overdruk (explosie) en concentratie giftige stoffen in de lucht (gifwolk). Daarmee zijn er ook drie typen aandachtsgebieden:

- brandaandachtsgebied
- explosieaandachtsgebied
- gifwolkaandachtsgebied

De afmetingen van de aandachtsgebieden van een milieubelastende activiteit worden bepaald door de warmtestralingscontouren, overdrukcontouren of concentratiecontouren van de giftige stof. In het Bkl (artikel 5.12) worden de volgende afstanden gegeven:

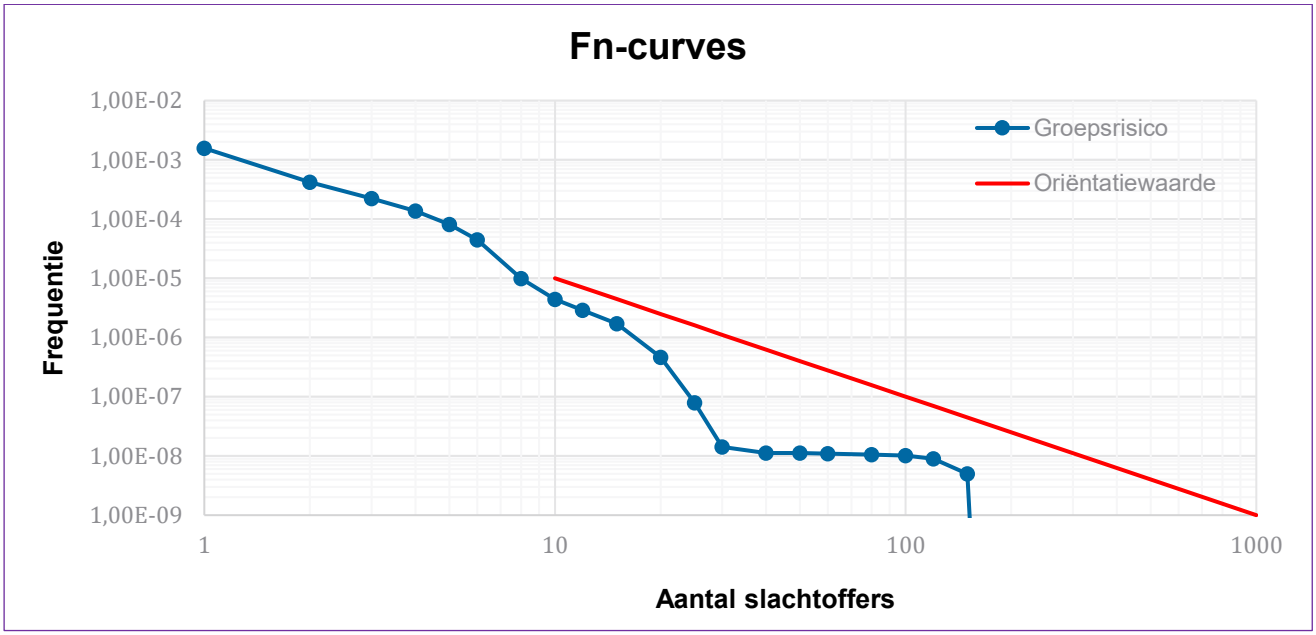

- Een brandaandachtsgebied is het gebied waar de warmtestraling ten hoogste 10 kW/m2 is, door een plasbrand of een fakkelbrand
- Een explosieaandachtsgebied is het gebied waar:
    a) Door een kokende vloeistof-gasexpansie-explosie (BLEVE), de warmtestraling ten hoogste 35 kW/m2 is; of
    b) Door een explosie de overdruk ten hoogste 10 kPa is.
- Een gifwolkaandachtsgebied is het gebied waar de concentratie hoger is dan de bij ministeriële regeling vastgestelde concentratie van een gevaarlijke stof gedurende een daarbij aangegeven periode. In artikel 5.12 lid 4 van het Bkl wordt hierbij een begrenzing van 1.500 meter genoemd voor het rekening houden met het gifwolkaandachtsgebied bij ruimtelijke ontwikkelingen.

2.4 Groepsrisico

Het groepsrisico ligt in het verlengde van het plaatsgebonden risico en houdt rekening met de daadwerkelijke aanwezigheid van personen. Het groepsrisico geeft de kans dat een groep personen slachtoffer wordt door een calamiteit met gevaarlijke stoffen. Hiervoor wordt de zogeheten fN-curve berekend waarin de kans op het aantal dodelijke slachtoffers wordt uitgezet tegen het aantal doden. Het groepsrisico kent, in vergelijking tot het plaatsgebonden risico, geen strikte normering. Wel wordt er uitgegaan van een oriëntatiewaarde, die recht doet aan risicoaversie (hoe groter de ramp, hoe lager het acceptabele risico). De oriëntatiewaarde geeft een eerste inzicht in het niveau van het risico. Binnen de omgevingswet moet de gemeente in het omgevingsplan binnen aandachtsgebieden rekening houden met het groepsrisico. Dit moet gedaan worden volgens de methode in het Handboek Omgevingsveiligheid van het RIVM. Om het groepsrisico te bepalen en beoordelen moet het bevoegd gezag daarnaast aangeven:

- hoe groot de personendichtheid in het invloedsgebied van de inrichting is (begrensd door 1% letaliteit) en hoe deze eventueel wijzigt in de toekomst;
- de mogelijke maatregelen die van invloed zijn op het groepsrisico en op welke wijze deze zijn meegenomen in het onderzoek;
- hoe rekening is gehouden met aspecten als rampenbestrijding, zelfredzaamheid van personen in het invloedsgebied en beheersbaarheid van de ramp bij een eventuele calamiteit.

Dit is de zogenaamde verantwoording van het groepsrisico. Als de oriëntatiewaarde wordt overschreden, kan toch een vergunning worden verleend. In alle gevallen moet door het bevoegd gezag worden nagegaan dat maatregelen zijn getroffen ter bescherming van personen in de gebouwen en op de locaties binnen het aandachtsgebied. Een voorbeeld van een groepsrisicocurve is in onderstaand figuur weergegeven.

Figuur 2.1: Voorbeeld groepsrisico en oriëntatiewaarde voor het groepsrisico volgens Bevi

2.5 Situatie Van Geloven

Binnen Van Geloven zijn verschillende ammoniakkoelinstallaties aanwezig. In deze QRA zal enkel de voorgenomen installatie van meer dan 10.000 kg worden beschouwd. De andere installaties bevatten minder dan 10.000 kg ammoniak en vallen onder onderdeel B van bijlage VII van het bkl. Deze installaties zijn reeds vergund. Voor deze installaties geldt een vastgestelde afstand voor het plaatsgebonden risico.

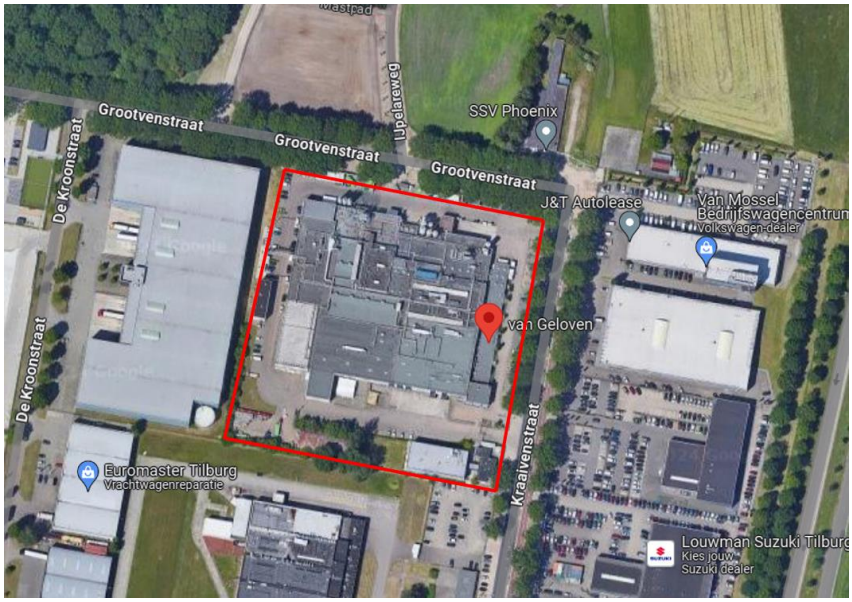

3 Algemene beschrijving van de inrichting

Van Geloven is een voedingsmiddelenbedrijf, dat diepvriesartikelen produceert zoals kroketten, satéstokjes, loempia's en bitterballen. Het gereed product wordt geleverd aan zowel horecabedrijven als groot- en kleinhandel. Een plattegrondtekening van de inrichting is opgenomen in Bijlage 1.

3.1 Ligging inrichting

De bedrijfslocatie van Van Geloven is gelegen op het Bedrijventerrein Kraaiven te Tilburg aan de Kraaivenstraat 1, kadastraal bekend bij de gemeente Tilburg als sectie TBG01-AE-358.

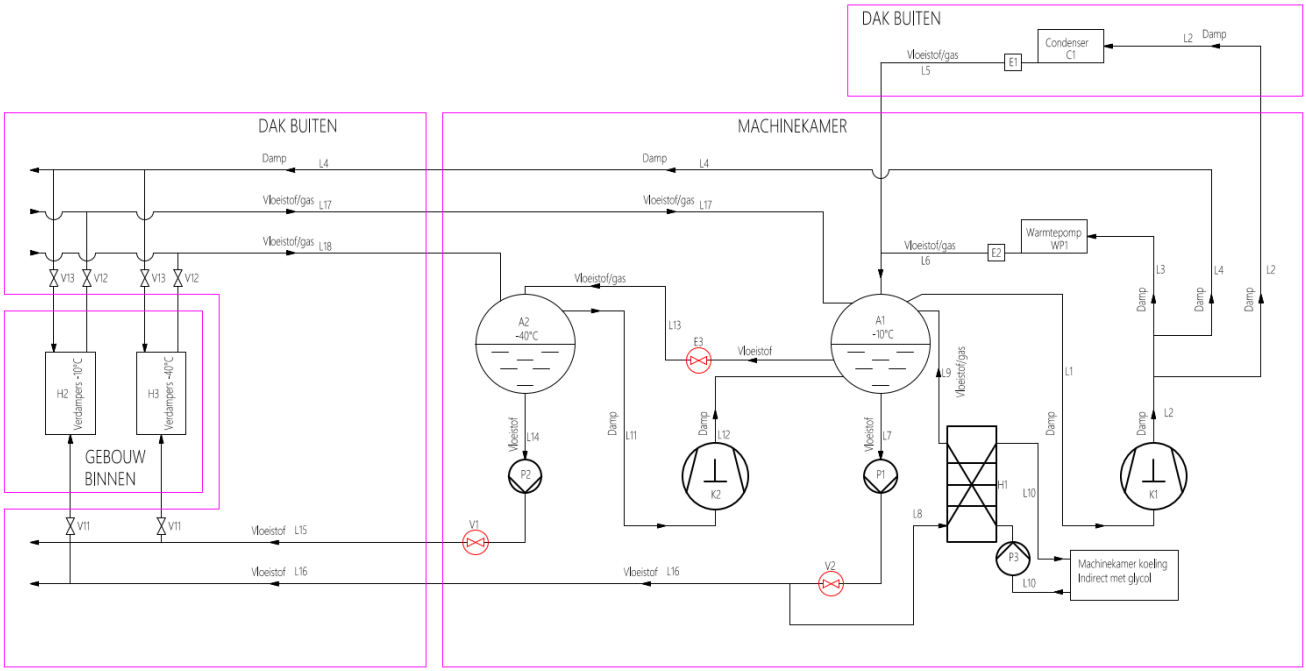

De inrichting is afgebakend door de wegen Kraaivenstraat en Groovenstraat. Van Geloven is gelegen op een bedrijventerrein waar diverse bedrijven zijn gelegen. Ten oosten van Van Geloven ligt de woonwijk de Stokhasselt en op circa 1 km ten zuidoosten de woonwijk De Lijnse Hoek. In onderstaande figuur is de ligging van Van Geloven weergegeven met de rode omlijning.

Figuur 3.1: Ligging van de inrichting ten opzichte van de omgeving

3.2 Relevante activiteiten

Ten behoeve van de opwekking van de benodigde koude voor het invriezen en de opslag van producten beschikt het bedrijf over een koelinstallatie die is gevuld met ammoniak (NH3). Er vindt geen opslag van ammoniak plaats. In het onderstaande figuur is een schematische weergave van de bestaande NH3-installatie weergegeven.

Figuur 3.2: Schematische weergave NH3-installatie Van Geloven

Op basis van de bedrijfsactiviteiten van Van Geloven en om de externe veiligheidsrisico's inzichtelijk te maken is onderscheid gemaakt in de navolgende (risicovolle) activiteiten:

- Verpompen van gevaarlijke stoffen;
- Transport van gevaarlijke stoffen door bovengrondse leidingen.

De modellering is uitgevoerd volgens de voorschriften uit hoofdstuk 3 van Module II van het Rekenvoorschrift Omgevingsveiligheid.

3.3 Procescondities & inhoud relevante ammoniakkoelinstallatie

In onderstaande tabel worden alle relevante insluitsystemen van de ammoniakkoelinstallatie weergegeven met de maximale inhoud ammoniak en de procestemperatuur. Van sommige installaties is niet bekend hoeveel ammoniak ze precies gaan bevatten of is de temperatuur veranderlijk. Voor die installaties is '—' ingevuld in de tabel.

Tabel 3.1: Procescondities en ammoniak inhoud onderdelen ammoniakkoelinstallatie

Component	Ammoniak inhoud (kg)	Ammoniak temp. (°C)
Vaten machinekamer		
A1: -10°C Afscheider	2.900	-10
A2: -40°C Afscheider	3.000	-40
Condensors/ warmtepompen		
C1: Condensor	2.500	--
WP1: Warmtepomp	140	--
Pompen/ compressoren		
P1: Koudemiddel pomp -10 °C	n.v.t.	-10
P2: Koudemiddel pomp -40°C	n.v.t.	-40
K1: Compressor -10°C	n.v.t.	-10

Component	Ammoniak inhoud (kg)	Ammoniak temp. (°C)
K2: Compressor -40°C	n.v.t.	-40
Overige onderdelen Machinekamer		
H1: Platenwisselaar machinekamer koeling (indirect met glycol)	n.v.t.	-10
E1/E2/E3: Vlotter expansie naar afscheider	n.v.t.	-10/ -40
Leidingen		
L1-L18: Leidingwerk tussen componenten	2.600	-10/ -40
Verdampers		
H1: Verdampers -10°C	7	-10
H2: Verdampers -10°C	1.755 [1]	-10
H3: Verdampers -40°C	-- [2]	-40
Globale hoeveelheid ammoniak in totale systeem	**12.000**	

De machinekamers waarin de meeste installatieonderdelen zijn gelegen zijn voorzien van geforceerde ventilatie. De ventilatie van de machinekamer op de begane grond heeft een capaciteit van 13.200 m^3/h, die van machinekamer op de eerste verdieping heeft een capaciteit van 18.345 m^3/h.

[1] De inhoud van alle gebruikers van verdamper H2 is gezamenlijk 2,7 m^3. Het is momenteel nog niet bekend hoeveel vloeistof hier in zit, dus conservatief is 100% aangehouden (resulteert met 650 kg/m^3 in 1.755kg). Voor de nalevering is conservatief de flashfractie van 0,07 gehanteerd voor de gehele inhoud, ook al zal in werkelijkheid slechts een deel vrij komen vanwege het kleppensysteem naar de verschillende gebruikers van de verdamper H2. De inhoud van 1.755 kg is niet gebruikt voor de optelsom in tabel 3.1; dit is alleen gebruikt als conservatieve aanname voor de modellering.

[2] De inhoud is niet relevant voor de berekeningen gezien de negatieve flashfractie (en bovendien momenteel nog niet bekend).

4 Uitgangspunten

4.1 Risicoanalysemethodiek

Zoals reeds beschreven zijn de risicoberekeningen uitgevoerd overeenkomstig het Rekenvoorschrift Omgevingsveiligheid in combinatie met het rekenprogramma Safeti-NL. De combinatie van het rekenpakket Safeti-NL en het Rekenvoorschrift wordt in het Bkl voorgeschreven als geüniformeerde rekenmethodiek voor het uitvoeren van een QRA.

4.2 Omgevingsfactoren

Voor de berekening van de externe risico's zijn de onderstaande onderwerpen van belang:

- weergegevens;
- ruwheidslengte;
- ontstekingsbronnen;
- domino-effecten;
- populatiegegevens.

4.2.1 Weergegevens

Voor het uitvoeren van de berekeningen zijn de weergegevens van Gilze-Rijen toegepast. In onderstaande tabel is een overzicht gegeven van de weerklassen die worden beschouwd.

Tabel 4.1: Weertype

Weerklasse	Beschrijving
B3	Instabiel weer, gematigd zonnig, lichte tot gemiddelde wind (3 m/s)
D1,5	Licht instabiel weer, zonnig en winderig (1,5 m/s)
D5	Neutraal weer, bewolkt en winderig (5 m/s)
D9	Neutraal weer, bewolkt en winderig (9 m/s)
E5	Licht stabiel, licht winderig (3 m/s)
F1,5	Zeer stabiel, zeer licht winderig (1,5 m/s)

4.2.2 Ruwheidslengte

De ruwheidslengte is een (kunstmatige) lengtemaat die de invloed van de omgeving op de windsnelheid aangeeft. In deze studie is uitgegaan van een ruwheidslengte van 780 mm, zoals opgenomen in de ruwheidskaart 2024 (ter plaatse van de coördinaten 132,400).

4.2.3 Ontstekingsbronnen

Ontstekingsbronnen zijn buiten beschouwing gelaten omdat het ammoniak betreft. De gevolgen door de giftige eigenschappen van ammoniak zijn veel significanter dan de brandbare waardoor ontstekingsbronnen niet relevant zijn.

4.2.4 Domino-effecten

Domino-effecten ontstaan wanneer het falen van één installatie met gevaarlijke stoffen leidt tot het falen van een andere installatie met gevaarlijke stoffen. Dit treedt op bij brandbare vloeistoffen en gassen. Het optreden van externe beschadiging en (interne) domino-effecten is niet opgenomen in de standaard faalfrequenties binnen een inrichting. Binnen een inrichting moeten voldoende maatregelen zijn genomen om uitstroming ten gevolge van externe beschadiging te voorkomen, zoals aanrijdbeveiligingen en snelheidslimieten, zodat geen aanvullende scenario's moeten worden opgenomen in de QRA. Bij Van Geloven zijn voldoende maatregelen getroffen om externe beschadiging te voorkomen.

Als onderdeel van de QRA dient verder te worden gekeken naar gevarenbronnen van buiten de inrichting die aanleiding kunnen geven tot externe beschadiging van binnen de inrichting gelegen bedrijfsonderdelen. Hieronder wordt nader op de mogelijke gevarenbronnen ingegaan.

4.2.4.1 Windturbines

Conform het Rekenvoorschrift Omgevingsveiligheid module IV [1] kunnen windturbines een effectafstand (uitgaande van de maximale werpafstand bij overtoeren) van maximaal 716 meter hebben. In een straal van 716 meter rond de inrichting zijn geen windturbines gelegen. De meest dichtbij zijnde windturbine is op meer dan 1 kilometer gelegen. Het ontstaan van domino-effecten veroorzaakt door windturbines wordt daarmee niet aannemelijk geacht.

4.2.4.2 Vliegvelden

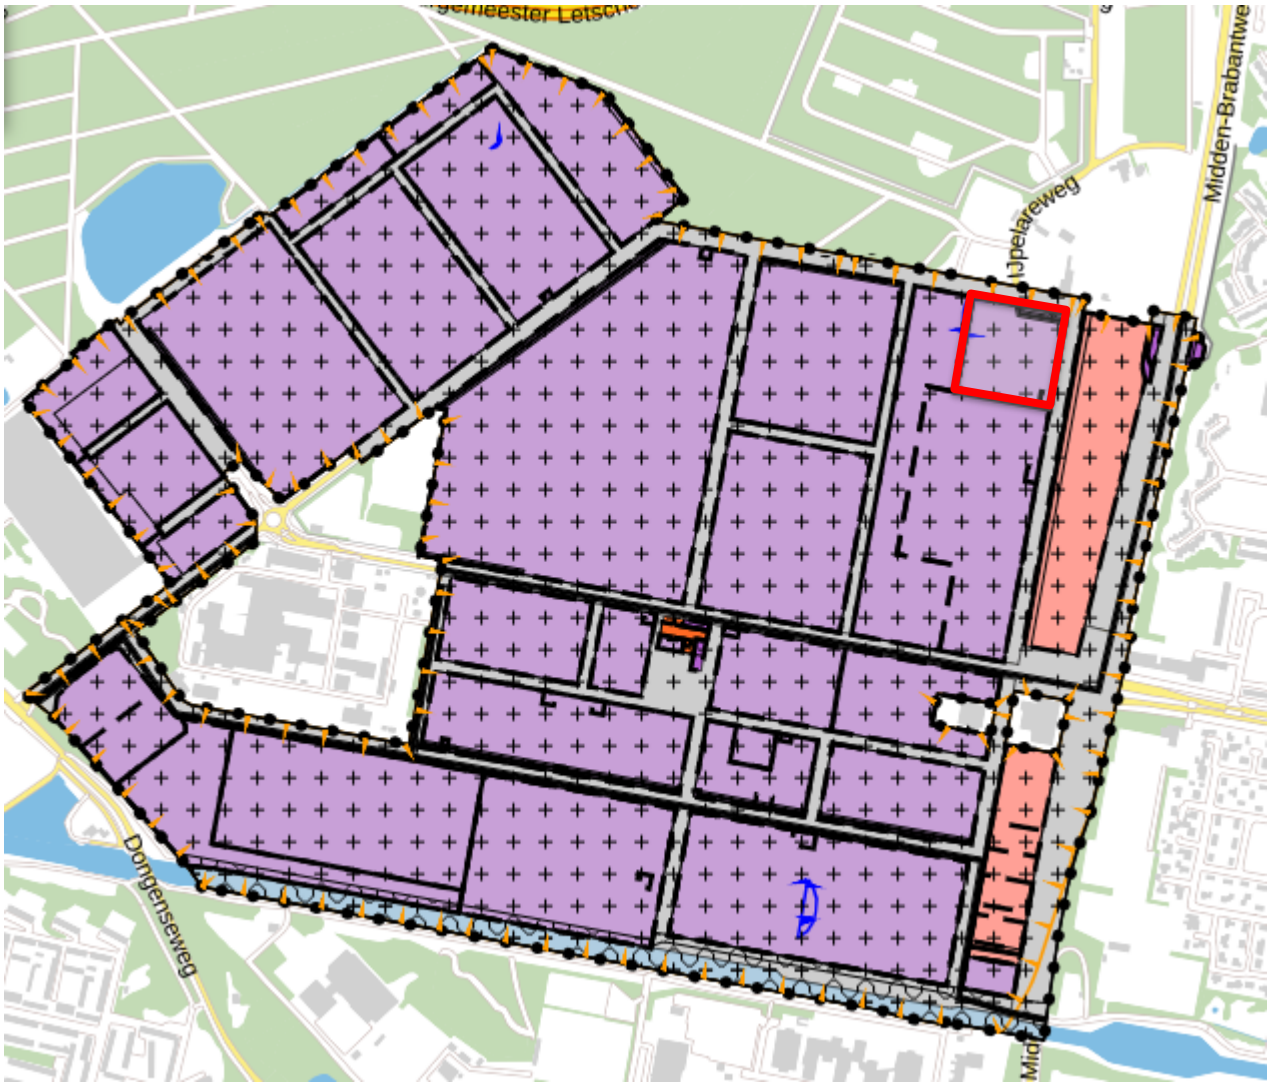

In de directe omgeving van de inrichting zijn geen vliegvelden gelegen. Het ontstaan van domino-effecten veroorzaakt door vliegverkeer wordt daarmee niet aannemelijk geacht.

4.2.5 Populatiegegevens

In paragraaf 6.1 is het figuur opgenomen waarop het invloedsgebied van Van Geloven is weergegeven. Ten behoeve van de berekeningen voor het groepsrisico dient de populatie binnen dit invloedsgebied te worden geïnventariseerd. Het invloedsgebied is bijna volledig over andere bedrijven op het bedrijventerrein Kraaiven gelegen en er zijn geen woningen binnen het invloedsgebied gelegen. Daarnaast is in het invloedsgebied ten Noorden van Van Geloven een schietbaan gelegen.

Voor de inventarisatie van de populatie in het invloedsgebied is gebruik gemaakt van de BAG Populatieservice. Via deze service zijn de populatievlakken in het Safeti-NL model geïmporteerd, vanuit de Basisadministratie Adressen en Gebouwen (BAG).

Daarnaast is ter verificatie gebruik gemaakt van de vastgestelde bestemmings- en omgevingsplannen [3] van de gemeente Tilburg. In onderstaand figuur zijn de bestemmingen, conform het bestemmingsplan van de gemeente Tilburg weergegeven.

Figuur 4.1: Ruimtelijke gegevens (locatie van Van Geloven is aangegeven met rode omlijning). De relevante bestemming betreffen: Bedrijventerrein (paars), Detailhandel-Perifeer (rood).

5 Modellering LOC scenario's

In dit hoofdstuk worden de initiële faalscenario's van de in hoofdstuk 2 gedefinieerde installatieonderdelen uitgewerkt. De modellering is uitgevoerd conform de voorschriften uit hoofdstuk 3 van Module II van het Rekenvoorschrift Omgevingsveiligheid. In sectie 5.1 worden de uitgangspunten voor de modellering weergegeven.

5.1 Uitgangspunten

De QRA wordt voor een installatie van 12.000 kg ammoniak uitgevoerd. De berekening is gebaseerd op de volgende uitgangspunten:

- De berekening is zo realistisch mogelijk; bij een aantal keuzes is een conservatieve benadering gekozen die leidt tot een lichte overschatting van het risico;
- De locatie voor de emissies is voor alle scenario's in de machinekamer, met uitzondering van de leidingen naar en van de verdamper en de condensor inclusief de leidingen naar de condensor: deze zijn gemodelleerd als lijnbronnen op het dak van het gebouw (zie bijlage 1);
- De leidingen van en naar de condensor zijn als puntbron gemodelleerd aangezien deze alleen op het dak van de machinekamer zijn gelegen;
- De geforceerde ventilatie van de machinekamer treedt direct in werking bij een lekkage, zodat de emissie vanuit de machinekamer volledig wordt afgevoerd via de ventilatieafvoer;
- De hoogte voor emissies vanuit de machinekamer, via de uitlaat van het ventilatiesysteem, is gelijkgesteld aan 13,5 meter;
- De diameter van de uitlaten van de ventilatie is 0,8 meter;
- De hoogte voor emissies op het dak is gelijkgesteld aan 8,5 meter;
- De richting van uitstroming is horizontaal;
- Conform sectie 3.3.1 van Module II van het Rekenvoorschrift worden in een machinekamer geplaatste vaten, pompen, compressoren en leidingen met een werktemperatuur lager dan het atmosferisch kookpunt van ammoniak (-33 °C) niet gemodelleerd. Daarnaast worden buiten gelegen dampleidingen met een werktemperatuur lager dan het atmosferisch kookpunt van ammoniak (-33 °C) niet gemodelleerd;
- Conform sectie 3.3.3 van Module II van het Rekenvoorschrift wordt voor binnen gelegen leidingdelen alleen het breukscenario gemodelleerd;
- Conform sectie 3.3.4 van Module II van het Rekenvoorschrift worden condensors en verdampers niet meegenomen, aangezien er geen sprake is van vloeistof gekoelde condensors, waarbij ammoniak zich in de mantelruimte bevindt;
- Breuk van een leiding wordt in de pers van een pomp of compressor conform sectie 3.4.3 van Module II van het Rekenvoorschrift gemodelleerd met een fixed duration release (inventory mass gedeeld door debiet x 1,5). In de zuig van een pomp of compressor wordt dit met een short pipe gemodelleerd (zie aanduiding in bijlage 2).
- Blokafsluiters zijn aanwezig in het ontwerp maar zijn niet beschouwd in de modellering, omdat de faalkansen niet bekend zijn. Het modelleren van scenario's zonder ingrijpen van blokafsluiters is een conservatieve aanname.

5.2 Te beschouwen LOC-scenario's

In de onderstaande tabellen zijn de initiële faalscenario's conform hoofdstuk 3 van Module II van het Rekenvoorschrift per installatieonderdeel beschreven. De systemen met een werktemperatuur lager dan het atmosferisch kookpunt van ammoniak (-33 °C) die in de machinekamer zijn gesitueerd zijn niet beschouwd. Dit betreft: A2, K2, P2, H3, L11, L14 en L18. L8, L9 en L10 zijn niet beschouwd aangezien de leidingen deel uitmaken van een secundair koelcircuit met een leidinglengte van minder dan 10 meter. Voor de condensor is een vloeistoffractie van 2,5% aangenomen, overeenkomstig de vloeistoffractie na het expansieorgaan E1 (dit is een worst case benadering).

Tabel 5.1: Te beschouwen LOC scenario's NH3 koelinstallatie

Installatie volgens PGS 3	Installatieonderdeel	LOC-scenario	Kans	Nalevering upstream zijde	Nalevering downstream zijde
Opslag onder druk	A1: -10°C Afscheider	G.1 Instantaan vrijkomen van de gehele inhoud	5 x 10^{-7} /jaar	Geen	Geen
		G.2 Vrijkomen van de gehele inhoud binnen 10 minuten in een continue en constante stroom	5 x 10^{-7} /jaar	Massa L17, massa condensaatleiding L5, na E1 en L6, na E2.	Massa L1, massa L7
		G.3 Continu vrijkomen uit een gat met een effectieve diameter van 10 mm	1 x 10^{-5} /jaar	Massa L17, massa condensaatleiding L5, na E1 en L6, na E2.	Massa L1, massa L7
Bovengrondse leiding nominale diameter 75-150 mm	L7: vloeistof valleiding A1	G.1 Breuk van de leiding en uitstroming van twee zijden	3 x 10^{-7} /meter per jaar	Massa A1	Geen
Bovengrondse leiding nominale diameter <75mm	L16: vloeistof valleiding A1	G.1 Breuk van de leiding en uitstroming van twee zijden	1 x 10^{-6} /meter per jaar	Pompdebiet van P1 x 60 s	Geen (H2 - flashfractie is negatief)
		G.2 Lek met een effectieve diameter van 10% van de nominale diameter, maximaal 50 mm	5 x 10^{-6} /meter per jaar	Pompdebiet van P1 x 60 s	Geen (H2 - flashfractie is negatief)
Bovengrondse leiding nominale diameter <75mm	L15: vloeistof valleiding A2	G.1 Breuk van de leiding en uitstroming van twee zijden	1 x 10^{-6} /meter per jaar	Pompdebiet van P2 x 60 s	Geen (H3 - flashfractie is negatief)
		G.2 Lek met een effectieve diameter van 10% van de nominale diameter, maximaal 50 mm	5 x 10^{-6} /meter per jaar	Pompdebiet van P2 x 60 s	Geen (H3 - flashfractie is negatief)

Bij het berekenen van de brontermen en nalevering is gebruik gemaakt van de gegevens in de onderstaande tabellen. Daarnaast is voor de berekening van de massa ammoniak voor de nalevering gebruik gemaakt van een dichtheid van vloeibaar ammoniak van 650 kg/m^3 en van gasvormig ammoniak van 0,8 kg/m^3. In bijlage 2 is voor elk scenario weergegeven hoe de bronterm is berekend.

Tabel 5.2: Gegevens leidingen

6 Resultaten en toetsing

Er is een risicoanalyse uitgevoerd met als doel het inzicht verkrijgen in de externe risico's. Deze QRA is uitgevoerd met het door de overheid voorgeschreven modelleringprogramma SAFETI-NL.

6.1 Effectafstand tot 1% letaal (LC01)

Het invloedsgebied is het gebied tot waar 1% letaliteitseffecten merkbaar zijn. Het invloedsgebied (als in de grootste effectafstand) bedraagt 173 m. Dit invloedsgebied wordt daardoor met name bepaald door het scenario 'Breuk van leiding L16 (vloeistof pompleiding A1)' bij weertype D1.5.

In onderstaand figuur is het invloedsgebied (op basis van de risicocontour 10^{-30} per jaar) weergegeven.

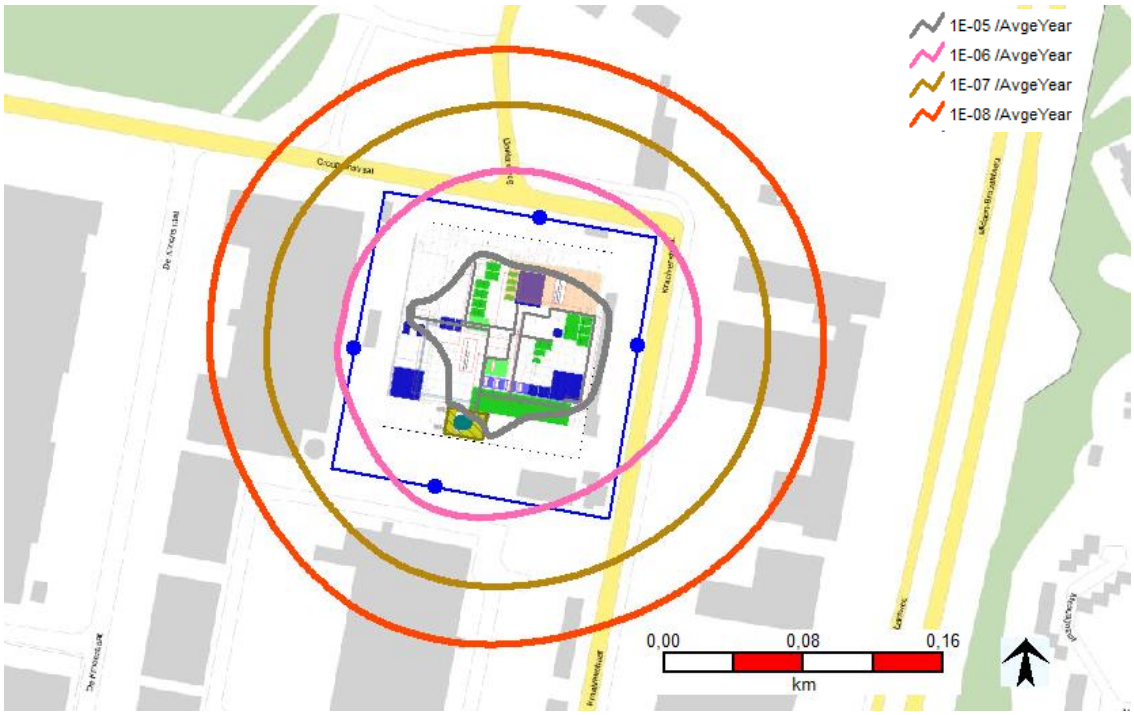

Figuur 6.1: Invloedsgebied van Van Geloven

6.2 Plaatsgebonden risico

Het PR, ook wel individueel risico genoemd, is de kans per jaar op een dodelijk ongeval ten gevolge van een ongewoon voorval (ongevalsscenario) indien een persoon (onbeschermd in de buitenlucht) zich bevindt op een bepaalde plaats waar hij voortdurend (24 uur per dag en gedurende het hele jaar) wordt blootgesteld aan de risico's van een ongewoon voorval.

Het PR wordt weergegeven als PR-contouren. Zo laat de 10^{-6} PR-contour die plaatsen zien waar de kans op het overlijden van een persoon één miljoenste per jaar bedraagt. Ter vergelijking: de gemiddelde (niet natuurlijke) overlijdenskans voor een willekeurige Nederlander is circa 10^{-4} per jaar, een factor 100 hoger. Het PR is onafhankelijk van de bevolkingsverdeling in de omgeving van de inrichting. Het wettelijk kader is beschreven in hoofdstuk 2 en maakt onderscheid tussen kwetsbare en beperkt kwetsbare objecten. In onderstaand figuur zijn de plaatsgebonden risicocontouren van Van Geloven opgenomen.

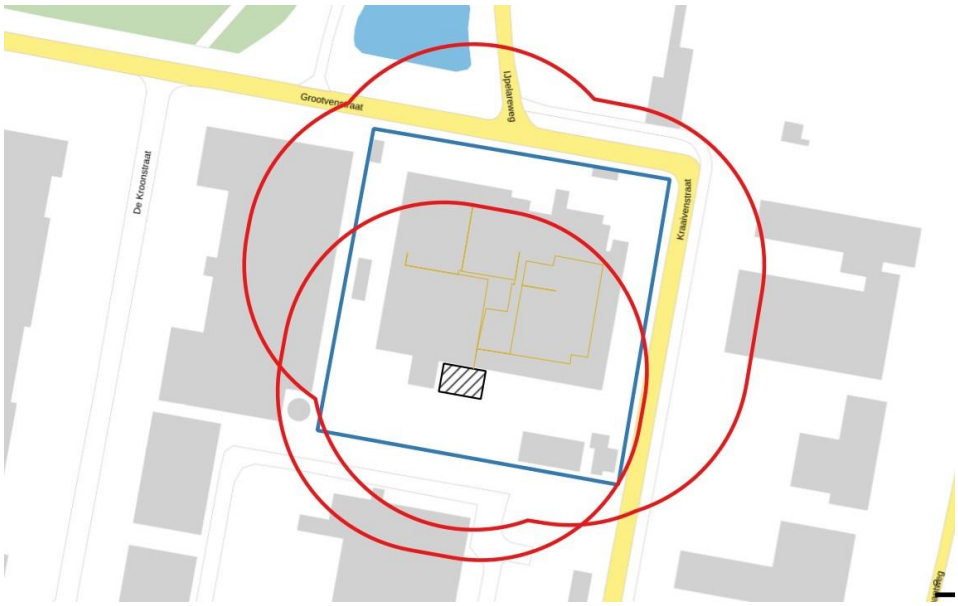

Figuur 6.2: Plaatsgebonden risico (berekend)

In de figuur is te zien dat de 10^{-6} PR-contour (in roze) buiten de terreingrens van Van Geloven is gelegen. Aan de westelijke terreingrens ligt de contour over het terrein van een buurbedrijf (Huijbtrex Tilburg), de contour is echter niet over het gebouw gelegen (tot aan de gevel). Aan de zuidzijde is de contour enkele meters over het terrein van een buurbedrijf (Châteraisé Europe) gelegen en aan de noordzijde over de openbare weg. Aan de oostzijde is de 10^{-6} contour gelegen over het terrein van Van Mossel, dit betreft een deel van de locatie waar geparkeerd wordt. Binnen de 10^{-6} PR-contour zijn geen (beperkt of zeer) kwetsbare gebouwen of locaties gelegen volgens het register uit de Atlas Leefomgeving waarmee wordt voldaan aan de eisen uit het Bkl (Besluit kwaliteit leefomgeving).

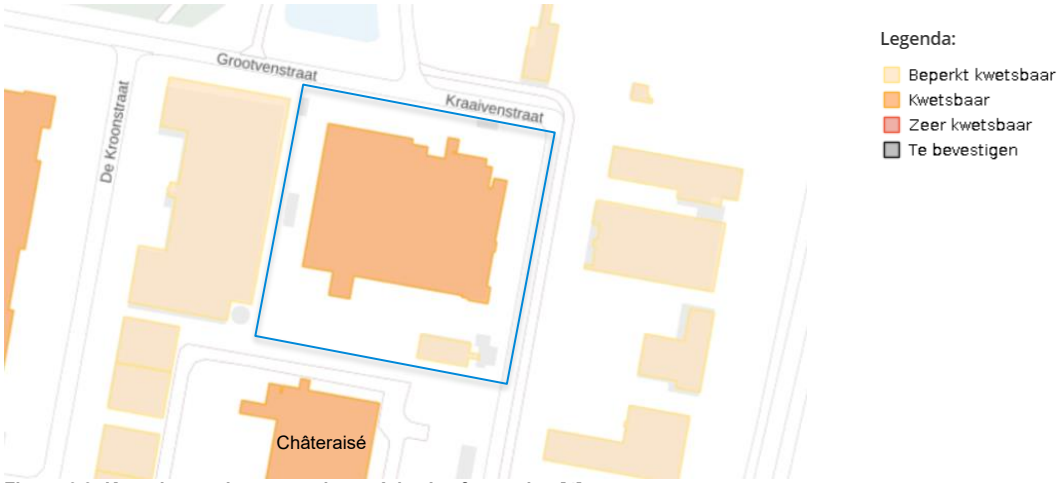

Zoals in het Bkl Bijlage VII E2 gemeld is, dient de PR 10^{-6} contour vergeleken te worden met de vaste afstand van installaties met maximaal 10 ton ammoniak (tabel B.1.1 in het Bkl). Indien de berekende PR 10^{-6} contour kleiner is, geldt namelijk de vaste afstand.

In Tabel B.1.1 kan gesteld worden dat uitgegaan wordt van de meest conservatieve werktemperatuur van -25ºC tot -5ºC (verdamper H2), opstellingsuitvoering 2 en een diameter van de vloeistofleiding van 65 mm. Hieruit resulteert dat de vaste afstand vanaf zowel de machinekamer als vloeistofleiding 85 m bedraagt. Deze vaste afstand is groter dan de berekende PR 10^{-6} contour en is daarmee bepalend voor het plaatsgebonden risico. In het volgende figuur is de vaste afstand van 85 m ingetekend rondom de buitenzijde van de machinekamer en vloeistofleidingen met behulp van QGIS (aparte contouren voor de machinekamer en vloeistofleidingen, waarbij de buitenste lokaal van belang is bij overlap).

Figuur 6.2: Plaatsgebonden risico (op basis van vaste afstand uit Bkl bijlage VII)

In de nieuwe aangevraagde situatie komt de PR 10^{-6} contour nu over Châteraisé Europe. In onderstaande figuur uit de Atlas Leefomgeving blijkt dat het hele gebouw is aangemerkt als kwetsbaar gebouw– (industriefunctie). Voor de beoordeling onder het Besluit kwaliteit leefomgeving (Bkl) en de regelgeving rond externe veiligheid moet in principe gekeken worden naar de feitelijke functie van (delen van) een gebouw en de aanwezigheid van personen, niet uitsluitend naar de kadastrische of bouwkundige begrenzing van het gehele bedrijf. Formeel is het gebouw als één kwetsbaar gebouw aangemerkt. De delen van het gebouw die binnen de plaatsgebonden risicocontour van 10^{-6} per jaar liggen, betreffen echter uitsluitend ruimten waar geen langdurig verblijf van personen plaatsvindt en waar de personendichtheid beperkt is. De regulier bezette werk- en verblijfsruimten bevinden zich buiten de contour. Hierdoor is de daadwerkelijke blootstelling van personen aan het plaatsgebonden risico beperkt en kan gemotiveerd worden dat de aanwezigheid van de 10^{-6} contour over een deel van het gebouw vanuit externe-veiligheidsoogpunt aanvaardbaar is. Indien het omgevingsplan het verder niet meer toelaat kwetsbare gebouwen binnen de PR 10^{-6} contour te realiseren, wordt pas voldaan aan het Bkl.
Verder gevolg voor Châteraisé door de contour van Van Geloven: binnen het contour mogen geen ruimtes gerealiseerd worden waar langdurig verblijf van personen noodzakelijk is en waar een hoge personendichtheid vereist is. Verder zijn er geen beperkingen ten aanzien van het huidige gebruik.

Figuur 6.3: Kwetsbare gebouwen volgens Atlas Leefomgeving [4]

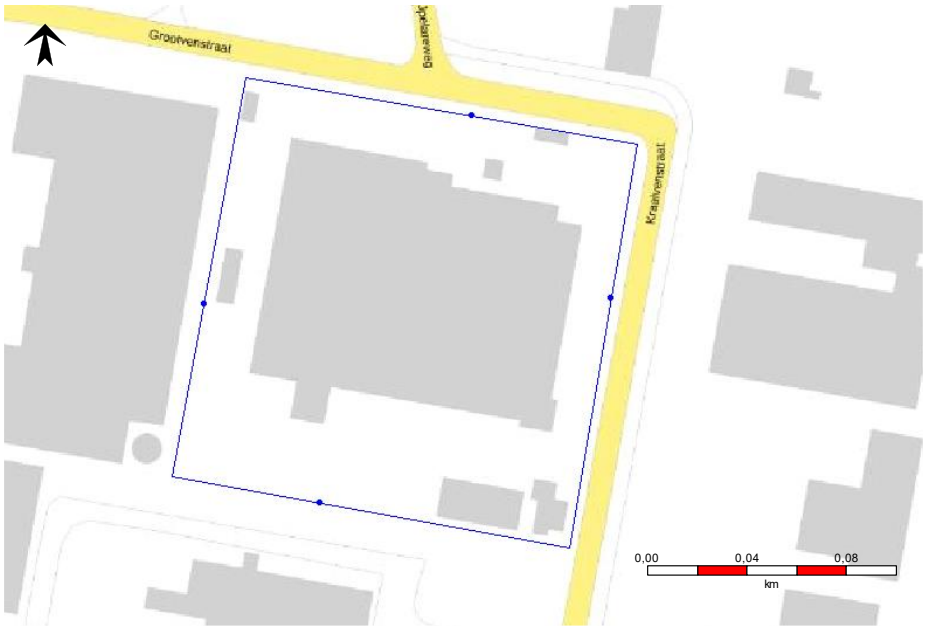

6.3 Groepsrisico

Het GR is de kans per jaar dat een groep van een bepaalde grootte populatie dodelijk slachtoffer wordt van een ongeval. Er wordt geen groepsrisico berekend ten gevolge van de activiteiten van Van Geloven.

6.4 Grootste bijdrage risico's

6.4.1 Individual risk ranking points

In elke windrichting is op de terreingrens op de plaats waar de 10^{-6} PR-contour buiten de terreingrens is gelegen een "risk ranking point" geplaatst. Op deze punten kan de bijdrage van het risico van verschillende scenario's bepaald worden. De risk ranking points zijn weergegeven in de volgende afbeelding.

Figuur 6.3: Risk ranking points

In Bijlage 3 is het "Individual Risk Ranking Report" opgenomen waarin per risk ranking point de grootste bijdrage aan het PR is weergegeven.

6.4.2 Maximale effectafstanden

In bijlage 4 is een overzicht weergegeven van de maximale effectafstanden van de afzonderlijke LOC scenario's. Het overzicht is door SAFETI-NL opgemaakt.

6.5 Aandachtsgebieden

Aandachtsgebieden zijn gebieden die zichtbaar maken waar mensen binnenshuis, zonder aanvullende maatregelen, onvoldoende beschermd kunnen zijn tegen de gevolgen van ongevallen met gevaarlijke stoffen door een nabijgelegen milieubelastende activiteit.

Er is een onderscheid tussen drie soorten gevaren: warmtestraling (brand), overdruk (explosie) en concentratie giftige stoffen in de lucht (gifwolk). Daarmee zijn er ook drie typen aandachtsgebieden. De types aandachtsgebieden en waardoor ze worden begrensd zijn:

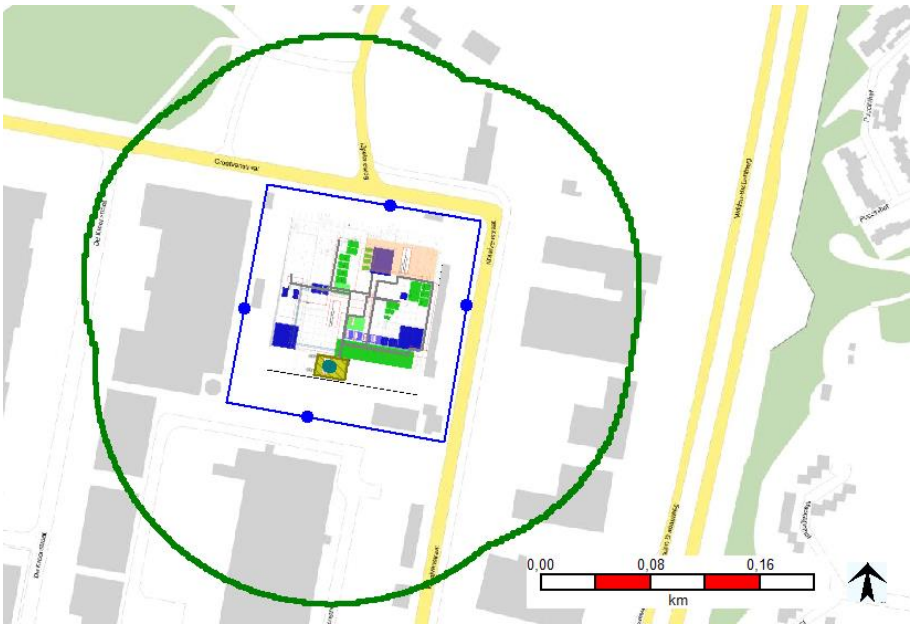

- Brandaandachtsgebied (10 kW/m^2 contour)
- Explosieaandachtsgebied (10 kPa overdrukcontour)

- Gifwolkaandachtsgebied (contour van bij ministeriële regeling vastgestelde concentratie)

Voor Van Geloven is alleen het gifwolkaandachtsgebied van toepassing.

6.5.1 Gifwolkaandachtsgebied

Door Safeti-NL wordt het gifwolkaandachtsgebied berekend door middel van de LBW Indoor Dose. Deze contour is berekend en in onderstaand figuur weergegeven om de ligging van het gifwolkaandachtsgebied aan te geven.

Figuur 6.4: Gifwolkaandachtsgebied

Binnen het gifwolkaandachtsgebied zijn verschillende gebouwen gesitueerd op en buiten het bedrijventerrein Kraaiven. Er moet door bevoegd gezag binnen het hierboven aangegeven gebied aandacht worden besteed aan de gevolgen voor de omgeving van een gifwolk ten gevolge van de ammoniakkoelinstallatie, bijvoorbeeld door het instellen van voorschriftengebieden.

7 Conclusie

Deze kwantitatieve risicoanalyse (QRA) is opgesteld voor Ad van Geloven B.V. (verder: Van Geloven) gelegen aan de Kraaivenstraat 1, te Tilburg. De aanleiding voor het opstellen van de kwantitatieve risicoanalyse is het voornemen om de vriesruimte uit te breiden. Als onderdeel van de uitbreiding is Van Geloven voornemens een ammoniakkoelinstallatie te plaatsen die energietoevoer krijgt van warmtepompen. Hierdoor gaat Van Geloven een nieuwe milieubelastende activiteit ondernemen, namelijk het exploiteren van een koelinstallatie met meer dan 10.000 kg ammoniak, en is daarmee verplicht een QRA op te stellen.

Het doel van de QRA is het vaststellen van het plaatsgebonden risico en de aandachtsgebieden van de risicodragende activiteiten. Aanvullend is het groepsrisico opgenomen, om de impact voor de populatie binnen een aandachtsgebied beter te kunnen duiden. De uitkomsten van de in dit rapport beschreven uitvoering van de QRA worden beschouwd in het kader van de wetgeving op het gebied van externe veiligheid, zoals opgenomen in het Besluit Kwaliteit Leefomgeving (Bkl).

De risicoberekeningen zijn uitgevoerd overeenkomstig het Rekenvoorschrift Omgevingsveiligheid [1] en de bijbehorende toelichting van januari 2025 in combinatie met het rekenprogramma Safeti-NL [2].

Plaatsgebonden risico

De 10^{-6} PR-contour is buiten de terreingrens van Van Geloven is gelegen. Aan de westelijke terreingrens ligt de contour over het terrein van een buurbedrijf (Huijbtrex Tilburg), de contour is echter niet over het gebouw gelegen. Aan de zuidzijde is de contour enkele meters over het terrein van een buurbedrijf (Châteraisé Europe) gelegen en aan de noordzijde over de openbare weg. Aan de oostzijde is de $PR10^{-6}$ contour gelegen over het terrein van Van Mossel, dit betreft een deel van de locatie waar geparkeerd wordt. Binnen de berekende $PR10^{-6}$ contour zijn geen (beperkt of zeer) kwetsbare gebouwen of locaties gelegen volgens het register uit de Atlas Leefomgeving.

Echter dient ook gekeken te worden naar vaste afstanden, en indien deze groter zijn dan de berekende contouren, gelden de vaste afstanden. Voor deze installatie bedraagt de vaste afstand rondom de machinekamer en vloeistofleidingen op het dak 85 m. Hiermee komen de plaatsgebonden risicocontouren op basis van vaste afstanden wel over enkele bedrijfspanden rondom te liggen. Deze zijn volgens de Atlas Leefomgeving gekenmerkt als beperkt kwetsbaar, behalve de locatie van Châteraisé Europe. Formeel is dit gebouw als één kwetsbaar gebouw aangemerkt. De regulier bezette werk- en verblijfsruimten bevinden zich buiten de $PR10^{-6}$ contour waardoor de daadwerkelijke blootstelling van personen aan het plaatsgebonden risico beperkt is. Indien het omgevingsplan het verder niet meer toelaat kwetsbare gebouwen binnen de PR 10^{-6} contour te realiseren, wordt pas voldaan aan het Bkl.

Groepsrisico

Er wordt geen groepsrisico berekend ten gevolge van de activiteiten van Van Geloven.

Aandachtsgebieden

Binnen het gifwolkaandachtsgebied zijn verschillende gebouwen gesitueerd op en buiten het bedrijventerrein Kraaiven. Er moet door bevoegd gezag binnen het gifwolkaandachtsgebied aandacht worden besteed aan de gevolgen voor de omgeving van een gifwolk ten gevolge van de ammoniakkoelinstallatie, bijvoorbeeld door het instellen van voorschriftengebieden.
