Dit document bevat resultaten van een stikstofdepositieberekening met AERIUS Calculator. U dient dit document te gebruiken ter onderbouwing van een vergunningaanvraag in het kader van de Wet natuurbescherming.

De resultaten geven de stikstoeffecten van deze activiteit weer voor Natura 2000-gebieden. AERIUS Calculator maakt enkel voor de PAS-gebieden inzichtelijk welke stikstofgevoelige habitattypen er voor komen en op welke hiervan een effect is. Op basis hiervan is aangegeven voor hoeveel hectares ontwikkelingsruimte benodigd is.

De berekening op basis van stikstofemissies gaat uit van de componenten ammoniak (NH_3) en stikstofoxide (NO_x), of één van beide. Hiermee is de depositie van de activiteit berekend en uitgewerkt.

 No exceedance* Exceedance Development space available** No development space available For the area in question will find no relevant deposition place on OR-relevant hexagons. The concept does (green checkmark or red cross) available or not development space is not applicable

* This result is not taken into account when assessing under the Nature Conservation Act. When assessing under the Nature Conservation Act the relevant hexagons for which development space is reserved will be looked at.

** When assessing a permit application under the Nature Conservation Act it will be determined whether there is sufficient development space available and that significant deterioration can be excluded.
