Figure 1 consists of three stratigraphic columns, labeled (a), (b), and (c), representing different sections of the Phu Phan Formation. Each column shows the vertical distribution of various fossil taxa, with depth in centimeters (cm) indicated on the left axis (100 to 1000 cm) and the corresponding fossil taxa listed on the right axis. The taxa are grouped into different categories, such as brachiopods, bryozoans, and other fossils. The distribution of taxa varies between the three sections, with some taxa being more common in certain sections than others. For example, in section (a), the taxa are distributed from 100 to 1000 cm, while in section (b), they are distributed from 100 to 1000 cm. In section (c), the taxa are distributed from 100 to 1000 cm. The taxa listed include various brachiopods, bryozoans, and other fossils, with their names written in both English and Vietnamese. The distribution of taxa is shown as horizontal bars of different colors (white, grey, and black) indicating the range of each taxon in the stratigraphic column.
