

## Battery Temperature control SOP

1. Barrels with devices containing damaged batteries or any loose damaged batteries must be stored close to door.
2. The pallets where batteries barrels will be placed must be of 30 minutes fire resistant
3. Place a D-type fire extinguisher or any other special fire extinguisher for the lithium ion batteries.
4. Keep the area free of any obstacles.
5. Use Dry sand or vermiculite to make layers for separation of batteries.

6. Measure the temperature of the barrels everyday before closing the facility.

7. If there is high temperature on barrels then please report to operation supervisor.
8. If there is any fire or smoke coming out of barrels inform the Fire Brigade Breda immediately and notify the competent authorities like OMWB and Gemeente Breda.
