

The diagram shows a 1v-DAC circuit with a feedback loop. The output of the DAC is connected to a 20kΩ resistor, which is then connected to the inverting input of an op-amp. The non-inverting input of the op-amp is connected to ground. The output of the op-amp is connected back to the DAC input, forming a feedback loop. The DAC output is labeled 0.6, and the op-amp output is labeled 0.4.
